

# Case Studies

## Babies Who Don't Latch

# Case 1

**Susan's baby is latching on her left breast but not on her right. Her left nipple is sore but she doesn't consider this a problem, since "breastfeeding is suppose to hurt."**

## Case 2

**It is 2am. Baby Jared last feed at 10pm. He is sleepy, has gagged several times with this latch attempt**

**His blood sugar was 59 at 10pm, now it is 51**

# Case 3

**Baby Isabelle is 28 hours old and has never latched. She is a 36 week gestation infant who was in the NICU for observation for 12 hours after birth**
